

Date August 21, 2019

Dear Client, Erlina Kumala Efti

The IBDP Computer Science Internal Assessment is designed to allow CS students the opportunity to demonstrate the application of their skills and knowledge, and to pursue their personal interests in the development of a Software solution. A fundamental part of the IBDP Computer Science IA is for students to work closely with a client to develop and implement an IT solution to a real-world problem. The process is designed to mirror how a client works with a commercial or professional IT developer.

The student, Covered for Anonymity is interested in working with you as a client. This implies that this student is required to meet with you regularly to discuss the progress of the product in the next 6-7 months to ensure that the end product developed meets your needs. Your role is not that of a supervisor, but rather to act as a client, which means that you will specify your requirements and regularly provide your opinion and feedback on the progress the student presents during your meetings.

To assist with this process, you will find attached a schedule of developer/client meetings showing all the stages of the project and how you will be involved with your time during the process. The schedule presents the minimum necessary for the student to meet with you. Additional meetings can be arranged if necessary and if your time allows. Columns for your signature and estimated dates are provided to indicate when each stage is completed. The description is provided for your information. It is the student's responsibility to arrange appointments and meet with you to provide the information described in each stage of the process.

Please sign the Client Agreement below to indicate that you are willing to be a client for the Computer Science IA topic:

Digital Tax keeper

Make sure to keep a copy of this letter and schedule. The student is responsible for keeping, signing and submitting another copy of the letter with your signatures by the end of the project.

If you have questions or concerns about the requirements for the CS IA at any time during the development of the product, please do not hesitate to contact me or (student's name)

Covered for Anonymity

Your support and time are truly appreciated.

Sincerely,

IT Developer Agreement (CS Student)

I hereby agree to be the IT Developer for the CS Project:

Digital Tax keeper

_____ and to meet regularly with Erlina Kumala Esti (client's name) as indicated on the Project schedule below. I agree to develop a product that will meet the client's needs based on required information as described in the CS Guide and to adhere by the established deadlines.
